EROS DELAY CREAM AND SPRAY

EROS Delay Spray and EROS Delay Cream are approved quality products specially formulated to reduce over-sensitivity in the male and prolong sexual pleasure. EROS will exert a calming effect and aid sexual confidence. Both products contain an emollient base, are non-toxic and will not harm rubber.

ACTIVE INGREDIENT

Lignocaine BP 10% w/v in Spray, 5% w/w in Cream.

APPLICATION

SPRAY Apply two or more measured sprays as required to the head of the penis shortly before intercourse. **DO NOT EXCEED SIX SPRAYS PER APPLICATION.**

CREAM Apply in a thin layer to the head of the penis shortly before intercourse. As a rule use about 1cm of cream as extruded from the tube, rub over the head of the penis and wait until slight numbness is felt.

In each case experience will decide the exact dosage and time interval required to suit individual requirements. Best results will be with a small dose and waiting for a few minutes longer before lovemaking. Use of a condom is advised.

Eros Cream and Spray should not be used more than 4 times in a 24 hour period.

ONSET OF ACTION

The time the products take to work depends on:

- the quantity applied
- if the foreskin is present or not
- person to person variability.

Normally they should start to cause a slight numbness in about 5 - 10 minutes.

DURATION OF ACTION

Again the duration of action depends on:

- The quantity applied
- Person to person variability
- Product loss during lovemaking

Normally the duration of action is no longer than 40 minutes.

ADVERSE EFFECTS

There should not be any pain associated with the use of the product (a feeling of warmth is not unusual) although the spray (not cream) may sting a little at first. If pain persists when using this product then you are either sensitive to one of the ingredients or the area you are applying it to may be damaged due to trauma or infection.

WARNINGS

For External Use Only. For vaginal intercourse only.

PACK SIZES
